

Yamaha CS6x / CS6R / S80 / S30 Sounddisk „Synth Basics“

„Synth Basics“ contains Internal Voices. You don't need any PLG-Board.

In this worldwide first CS6x / CS6R / S80 / S30 Synthbank you find great synth sounds made by one of the Factory Programmer. There are basic sounds for all kinds of music production: Polyphonic Analogsynths, Pads, Lead- and Hooksynths, fat Synthbass, Filtersweeps, spacious Atmospheric.

Loading Procedure

You can load voices with Type „all“ or „all-voice“ from Smart Media Card to Internal Memory („INT“). But you can also load MIDI file to external sequencer and send it to CS6x / CS6R / S80 / S30. And you can send directly from editor.

INTERNAL Voices will be erased, using Type „all“ also Performances and PLG-Voices. Please save your own voices before loading!

You can recall Factory Voices with reset (Hold VOICE, PERFORM und STORE switching power on).

There are three ways to transmit voices to CS6x / CS6R / S80 / S30:

1. Send Files „SYNBASIC.S2A“ und „SYNBASIC.S2V“ with CARD FILER from computer (PC/MAC) to Smart Media Card and load voices with „all“ or „all-voice“.
2. Load file „SYNBASIC.S2V“ to PC-Editor and send voices directly to CS6x / CS6R / S80 / S30. If you use MAC-Editor please use file „SYNBASIC“ without extension.
3. Load file „SYNBASIC.MID“ to external sequencer (Cubase, Logic, XG-works...) and start sequencer with slow tempo. CS6x / CS6R / S80 / S30 will receive voices.
