MONTAGE (M) / MODX(+) Cover Performance

Thank you so much for choosing an EASY SOUNDS Cover Performance.

This refers to a single Performance tailored to a specific music title for playing in a cover band. In some rare cases, it might be divided into two Performances.

This Performance is based on Preset Waveforms and does not contain any User Waveforms or User Arpeggios. This makes it easy to install in basically two ways and to integrate into your user memory.

This ReadMe does not contain any instructions on how to play and use the Performance. This information is provided in a related tutorial video, which is available online (YouTube, alternate server). A link to this video can also be found in the product description for offline access.

The following pages contain instructions on how to transfer the Performance to your instrument.

Legal Notice

Please note that this work is protected by international copyright. It is essential to purchase this content to obtain a legal license to use this Performance in any of your work, whether you are a professional, semi-professional musician, or using it for personal enjoyment.

Please consider that your payment is the sole basis that makes this work possible. We are unable to provide this time-intensive work for free.

Therefore, please do not share this content with others, nor use shared content from others. We trust in you as our customers, value your loyalty, and sincerely appreciate your honesty in supporting our work, which allows us to continue. Thank you very much!

Technical Information

The Performance is provided in a Library File (.X7L, .X8L, partially also .X2L), that contains only this one Performance.

This content is provided as download only in a compressed ZIP file. Please un-ZIP it first and then copy it to a USB flash drive to load the content into MONTAGE.

The ZIP-file contains 3 files:

- Example_Name.X7L (MONTAGE Library File - **also compatible with MONTAGE M!**)
- Example_Name.X8L (MODX Library File)
- This document (MM_Single_CovPerf_EN.PDF)

In some cases alternate files for different key-size versions (61/76/88) are provided. Those files contain the number of keys as a part of the file name like i.e. Example_Name61.X7L

This content is based on MONTAGE operating system OS v3.5 and MODX OS v2.5 or higher. Updates are available using the following link:

[Yamaha MONTAGE Downloads](#) | [Yamaha MODX Downloads](#)

It might work on a previous version but we can't grant it and highly recommend to update your instrument accordingly.

How to load the Performance into MONTAGE (M) / MODX(+)

! Please back up your data before loading new content. To avoid data loss, regularly save these backup files to various locations such as hard drives, cloud services, etc. **!**
! A recent backup file allows you to restore the last system state in case of a problem. **!**

- [UTILITY] > Contents > Store / Save > Content Type = „Backup File“

The content is loaded as Library File (.X7L/.X8L) containing only one Performance. **Please use the MONTAGE Library File (.X7L) for MONTAGE M which works without any restrictions.**

Loading the Performance(s) using the Library file

Important NOTE:

When loading a **Library File** a new LIBRARY will be added. No available User data will be overwritten. The next empty library of the eight available **LIBRARY's 1 – 8 (-16 for MONTAGE M)** will be used. Library Performances can be edited, but not stored to the library. Edited Performances must be always stored as User Performance.

Loading a Library File:

- Create a backup of your current memory
- Copy the file „Example_Name.X7L or .X8L“ to a USB flash drive
- Connect the USB flash drive to USB TO DEVICE to your instrument
- Press [UTILITY] and select „Contents > Load“
- Select the Content Type „Library File“
- Choose the file „Example_Name.X7L or .X8L“
- The display shows „Now Loading“

After loading you can select the Library Performances this way:

- Press [CATEGORY SEARCH].
- Select the Bank „Example_Name“ on top left of the display below „Bank/Favorite“.
- Select Main Category „All“
- The referring Performance shows up

Importing the Performance(s) from the library to your User memory:

To import the Library Performance to your User memory please use the function „Import to User Bank“:

- Press [UTILITY] and select „Contents > Library Import“
- Tap on „Example_Name“
- Mark the Performance
- After the selection tap on „Import to User Bank“
- The marked Performance(s) will be copied to the User Bank

! Please save a new backup file afterwards.

You can also find tutorials on importing library content at the following links:

[Synth Tips | Import Dedicated Performances From Installed Library | MODX/MONTAGE](#)

[Montage M Tips | Importing dedicated Performances from an installed Library](#)

Deleting Libraries:

- Press [UTILITY] and select Contents > Data Utility > Library.
- Tap on the Library you want to delete.
- Tap on „Delete“.
- Confirm with „Delete > Yes“.

Please note that we cannot provide any support for issues with file handling, computer operating systems, USB devices or network/download issues. Thanks so much for your understanding.

Enjoy your new Sounds!
